## Video Doorbell

The Control4 DS2 door station delivers an incredible audio and HD video intercom experience, enabling customers to monitor and communicate with the front door or their security gate.

Combined with Control4 touch screens, customers enjoy greater convenience and peace of mind throughout the home.

The DS2 is available in flush-mount and surface-mount options, in black, brushed nickel, and Venetian bronze finishes. The optional integrated keypad is ideal for customers with gates or for those who want to add more security at their doors.

It offers fast connection speed, a camera which can be viewed outside of an intercom call, improved low-light performance, motion detection plus camera snapshots which can be emailed to a customer's mobile device.

## Panelised Lighting

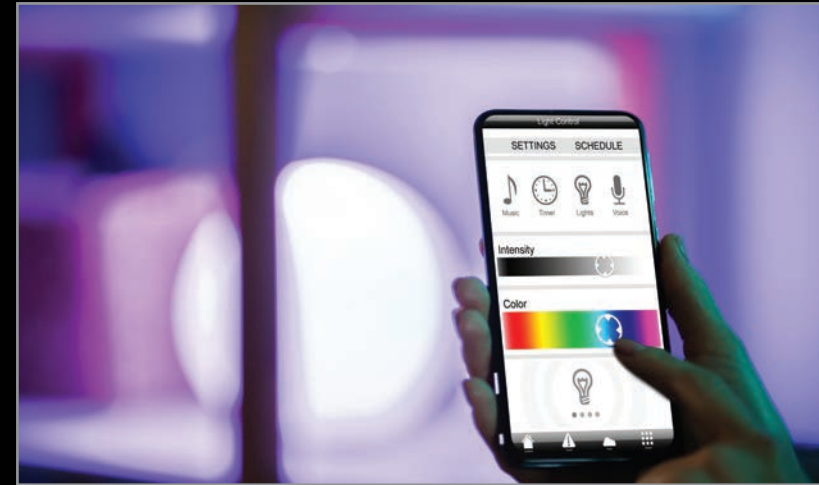

Around your property inside and out, we can control all your lights, whether it be setting scenes or automatically turning lights on and off at dawn and dusk, with the scheduler.

There is Control4 'mockupancy', which learns your movements and mimics the lights you use inside the property when away.

We offer a wide range of light switch styles, so you will always find one to suit your property.

You are even able to program buttons to perform multiple tasks i.e. set a lighting scene, turn on an audio zone, and play a favourite radio station.

For a new build or complete re-wire we recommend the panelised lighting solution, but we can retro fit wireless lighting into existing properties.

## Security

We can install CCTV cameras all around the outside and inside of your property, which will allow you 24/7 access from wherever you are in the world. Plus 24/7 recording and movement notifications.

Locks can be added into the system, so you as a customer can check on the state of doors. Again notifications can be set up to allow you to know when someone enters or exits the property. Access control can also be programmed in at certain times (e.g. access for cleaners, etc.).

## Multi-room Video & Audio distribution

From one centralised hub, we can house all your video and audio sources in a fully dressed and monitored rack.

4K streaming throughout the house, along with high quality audio distribution mean you can watch or listen to anything you desire in any room, at the control of a single button.

Sky UHD, Apple TV, Roku and Amazon Fire sticks are all supported, as are Spotify, Shairbridge, TuneIn and many others.

## Networking & Wireless Access Points

Installing only the best networking and wireless access points, we ensure no area of any property struggles to get a wireless signal.

Included is a free monitoring app 'ovrc', which gives the end user control over their network.

Managing what devices are attached to it, what access these devices have along with the content they can view.

It also provides the installer a vital tool in troubleshooting and fixing potential issues remotely.

## Home Cinema

We can install a dedicated home cinema, with full 4K projection, Dolby Atmos surround sound, acoustically transparent projection screen, RGBW lighting and cinema chairs.

All controlled like everything else from your app, touchscreen, remote control or lighting keypad.

## Touchscreens & Universal Remotes

Control4 offer in-wall and on-table touchscreens dedicated to seamlessly controlling and viewing your audio, visual and security equipment.

Available in 8" or 10" version in black or white, the touchscreens can be customised to show specific favourites in each room.

Two types of universal programmable remote controls are offered; one suitable to be thrown around a bit (SR260) and one that's just a little bit special (Neeo).

## Voice Control

Currently (August 2022) not available in the UK, but it is believed that it soon will be, Josh will enable the end user to control all of their smart devices through the power of their voice.

There are currently some solutions available, but from experience, we want to wait for Josh, and integrate this solution.
